

Bonino Carding Machines S.r.l. was founded in Biella in the early 1900s, when the area was establishing itself as an international hub for the production of high-quality yarns and fabrics for clothing.

Initially, it produced components and then woollen carding sets and worsted and semi-worsted carding machines, consolidating its position among the leaders in the sector.

It then went on to design nonwoven cards for use in the automotive sector and in the production waddings, parts of mattresses and goods for other industrial sectors such as filtration, packaging and healthcare.

It is currently one of the few companies in the world capable of producing a line including waste recycling, with cutting and tearing processes and wastes re processing in spinning and nonwoven fields.

The Management assumes responsibility and authority for developing, maintaining and improving the Quality Management System in accordance with the **UNI EN ISO 9001:2015** standard and for promoting the involvement of all interested parties through the communication of this document.

The scope of application for our QMS is: ***Design, manufacture and after-sales service of carding lines and special machines for the textile sector.***

The high quality of our products is the guiding principle behind all our business processes, which are geared towards complete customer satisfaction and the sustainable development of the organisation, while respecting its needs. Furthermore:

- We constantly evaluate our performance and that of our strategic partners
- We collaborate with trusted suppliers who are experts in their respective fields
- We actively listen to customer feedback to improve our service/product
- We welcome constructive criticism as an opportunity for growth
- We meet agreed deadlines punctually
- We work to exceed expectations, understanding the context and needs of all stakeholders
- We analyse risks and seize opportunities for evolution
- We are committed to continuous innovation and regulatory compliance

Together, we create solutions and demonstrate that technical innovations, high productivity and our quality standards harmonise and contribute to increasing customer satisfaction.

Our focus on quality ensures that our machines and systems remain available even after decades of intensive use. We guarantee this through the use of cutting-edge technologies, after-sales service and the availability of spare parts.

Every employee is aware of their objectives and their individual contribution to the company's success, which is why we support them in their professional growth and technical training.

We are committed to protecting the health and safety of our workers and the machines and systems we produce, always paying attention to our environment and the sustainable use of resources in various processes, from design to production and throughout the entire life cycle.

At each review, the Management assesses the suitability of the policy, analyses company data and provides improvement objectives for the following period.
